

Booth & Day-Of Checklist

Print this page. Tick every box. Do not improvise anything on this list — improvisation is what makes demos fail.

T-minus 48 hours (two days before)

- ☐ C:\SUBARNAREKHA\START-DEMO.bat starts cleanly and says "DEMO IS READY".
- ☐ Full demo (2-Demo-Script) rehearsed end-to-end, with a timer, twice.
- ☐ Voice scenes (Speak to fill, Voice command) rehearsed with the actual external mic.
- ☐ Screen-capture recording made of a successful full run. Saved on the laptop AND the pendrive.
- ☐ Backup laptop (if any): SUBARNAREKHA-Setup.zip extracted to C:\ , START-DEMO tested on it.
- ☐ Printed and ready (colour, 100% scale): **booklet** = 7-Synopsis (+ 6-AaaS-Guidebook), **poster** = 8-Poster-A2 , **charts** = 9-Charts-A3 . The rules ask for booklet, posters and charts.
- ☐ **Pendrive** with the soft copies (all PDFs + demo video). The rules allow sharing through a pendrive.
- ☐ 4-Presenter-Brief printed. Folded. In the presenter's pocket.

T-minus 24 hours (day before)

- ☐ Laptop fully charged. Charger in the bag. Spare charger if available.
- ☐ External mic tested. Spare mic or headset in the bag.
- ☐ Laptop stand / riser if the booth surface is low — eye-level demos win.
- ☐ Two HDMI adapters. One USB-C to HDMI. One USB-C to VGA as legacy backup.
- ☐ Extension cord or power strip — booths never have enough outlets.
- ☐ Water bottle. Throat lozenges. Energy bars.
- ☐ Team t-shirts / branded clothing laid out, ironed.
- ☐ Route to venue confirmed. Backup route confirmed.
- ☐ Sleep. Seriously. A tired presenter loses every Q&A.

T-minus 2 hours (arriving at venue)

- ☐ Setup booth. Laptop on stand, mic plugged in, power connected. Poster and charts up.
- ☐ Connect the laptop to the projector / smart board (HDMI). Check the picture is readable.
- ☐ Double-click START-DEMO.bat . Wait for "DEMO IS READY". Leave it running all day.
- ☐ Do one Read aloud, one Translate and one Read document on the SSEPD tab (warms the cache).
- ☐ Internet available? Open <https://ssepd.odisha.gov.in/> for the real-site scene. If not, skip that scene.
- ☐ Close every other window and tab. Hide the taskbar if possible.
- ☐ Turn notifications OFF system-wide. WhatsApp, email, updates, everything.
- ☐ Silence the phone. Put it face-down.
- ☐ Disable OS updates, screen-saver, screen-lock during the demo period.
- ☐ Set display scaling so the demo is readable from 2 metres away.

- ☐ Open the hidden recording tab — confirm it plays with sound.

T-minus 30 minutes

- ☐ Final dry run of the full demo. If anything breaks: `STOP-DEMO.bat` , then `START-DEMO.bat` .
- ☐ Test sound output at booth volume. Too quiet and judges lean in with strained faces; too loud and you annoy the neighbouring booth.
- ☐ Place the synopsis booklets at the front edge of the table, angled toward approaching judges.
- ☐ Presenter drinks water, stretches, does three breaths.

During each demo

- ☐ Stand up when a judge approaches.
- ☐ Hand them a synopsis booklet within 20 seconds.
- ☐ Start with the hook, not the problem. Curiosity first, sermon second.
- ☐ Watch for boredom signs — crossed arms, looking past you. If they appear at 30 seconds, skip to the demo *immediately*.
- ☐ Never say "this is buggy" or "this didn't work earlier" even if it's true.
- ☐ End with an explicit ask. Always.
- ☐ Write down the judge's name + question in a notebook as soon as they walk away.

Between demos

- ☐ Close any modal dialogs, stray windows, debug consoles.
- ☐ Reset the demo tabs to the opening state. Don't let a judge watch you scroll back up.
- ☐ Drink water. One sip, not a gulp.
- ☐ If you've repeated the demo five times, take a one-minute break between judges. Energy matters.

End of day

- ☐ Collect every business card / note from every judge interaction.
- ☐ Write up the judges' questions the same evening, before sleep.
- ☐ Patch the single most embarrassing demo hiccup before tomorrow.
- ☐ Charge the laptop to 100% overnight.

What to pack — the physical list

Tick each item into a bag the night before.

Electronics

- ☐ Primary laptop + charger
- ☐ Backup laptop + charger (if available)
- ☐ Phone + charger + power bank
- ☐ External mic + USB adapter
- ☐ In-ear headphones
- ☐ HDMI cable + USB-C to HDMI adapter + VGA adapter

- ☐ Extension cord / 4-way power strip
- ☐ Laptop stand or riser
- ☐ Mouse (booth surfaces are often too small for trackpad)

Paper

- ☐ Synopsis booklets (7-Synopsis), one per judge plus spares
- ☐ Poster (8-Poster-A2) + tape / pins to hang it
- ☐ 3 charts (9-Charts-A3)
- ☐ 1× printed 4-Presenter-Brief + 2-Demo-Script
- ☐ 1× notebook + 2× pens for capturing judge questions

Soft copies

- ☐ Pendrive: all PDFs + demo video (and, if 16 GB+, the SUBARNAREKHA folder as a backup)

Human supplies

- ☐ Water bottle (refillable)
- ☐ Energy bars
- ☐ Throat lozenges / spray
- ☐ Deodorant (long day, hot room)
- ☐ Tissues / handkerchief
- ☐ School uniform / neat attire
- ☐ Jacket (venues over-AC)
- ☐ Comfortable shoes

Boring but critical

- ☐ Venue entry pass / registration confirmation
 - ☐ Photo ID
 - ☐ Printed schedule with session times highlighted
-

Fallback plans — decide the trigger in advance

IF THIS HAPPENS	TRIGGER IMMEDIATELY
Wi-Fi flaky	Skip the real-site scene. Announce: <i>"Everything runs on this laptop — which is the point."</i>
Demo crashes mid-scene	Switch to recorded tab. One sentence: <i>"Let me show you the scripted run."</i>
AI service slow / timing out	Same as above. Do not debug.
A service stops	<code>STOP-DEMO.bat</code> , then <code>START-DEMO.bat</code> (about 1 minute). Keep talking over the poster meanwhile.
Laptop crashes	Hand out the synopsis. Pitch from the poster and charts. Play the demo video from the pendrive.
Mic fails	Skip the voice scenes; show the recorded video of them. Say <i>"The booth is too loud for the mic — here it is recorded."</i>
Judge interrupts with a tough question	Pause the demo. Answer briefly. Ask <i>"shall I continue the demo or go deeper here?"</i>
You blank on a number	Flip open the printed brief. Say <i>"I want to be precise — one second."</i>
You blank on the next scene	Stop. Take a breath. <i>"Let me reset — the next thing to show is..."</i> Judges forgive this.
Someone asks for something we haven't built	<i>"That's on our roadmap."</i> Point at chart 3 (Rollout plan).

What judges remember

After a day of 40 booths, judges remember three things from a good booth:

1. **A specific user story.** "Arun, 68, applying for his pension by voice in Odia" sticks. "An AI accessibility platform" does not.
2. **A visible, honest demo.** One thing that works, shown confidently, beats five things that sort-of-work. Odia working live trumps Hindi working live, at an Odisha event.
3. **A specific ask.** "Can you introduce us to OCAC or the 5T cell?" is memorable. "We'd love feedback" is not.

Design every interaction around planting those three things.

After the hackathon

- ☐ Email every judge who left a card within 48 hours. Reference a specific thing they said.
- ☐ Thank the guide teacher and school for their support.
- ☐ Write up lessons learned — what worked in the demo, what didn't.
- ☐ Update `DEMO_SCRIPT.md` with the real timings observed in the field.
- ☐ Keep shipping. The hackathon is a milestone, not the finish line.
