

How AaaS works

1 / 3

STEP 1**Any website**

- A government portal adds **one line of code**
- or the citizen uses our **Chrome extension**
- The website itself is not changed

**STEP 2****ଞ widget**

- Round button, six tools, Odia labels first
- Uses the phone or laptop mic, speaker and screen
- About 0.5 MB, nothing to install

**STEP 3****Gateway**

- One API key per institution
- Counts usage for each department
- Admin console for the operator (e.g. OCAC)

**STEP 4 · FOUR AI SERVICES****Speech → text**

IndicWav2Vec (AI4Bharat) · Odia

Text → speech

MMS-TTS (Meta) · Odia, Hindi, English

Translate + Easy Read

IndicTrans2 (AI4Bharat) · our rule engine

Read scanned documents

Tesseract OCR · images and PDFs

Example: a citizen taps ଦଲିଲ ପଢ଼ (Read document) on a scanned pension circular

1

The widget finds the scans and PDFs on the page and shows their thumbnails

2

OCR reads the text off the chosen scan

3

Easy Read simplifies it, then IndicTrans2 turns it into Odia, keeping dates and numbers exact

4

MMS-TTS reads the Odia aloud, with numbers spoken as Odia words

5

The citizen sees the original page and the Odia text side by side, with a highlight that follows the voice

No cloud

Voice and documents stay on the government's own server

Works offline

Runs on one ordinary laptop CPU, with no graphics card

Never dies

Every service has a backup mode, so the button stays alive

Open source

Apache-2.0: no licence fee, and Odisha owns it

The six tools and who they help

2 / 3

Tool	 Blind	 Low vision	 Cannot read well	 Elderly	 Hand / motor disability	 Dyslexia	 Odia-only speakers
ପଢ଼ି ଶୁଣାଅ Read aloud Reads the page in Odia with a follow-along highlight	☒	☒	☒	☒	☐	☒	☐
ଅନୁବାଦ Translate The whole page turns into Odia, and one tap undoes it	☐		☐	☒			☒
ସହଜ ପଢ଼ି Easy Read Official language becomes simple words			☒	☒		☒	☐
ଦଲିଲ ପଢ଼ି Read document Scanned notices and PDFs are read, turned into Odia and read aloud	☒	☒	☒	☒		☐	☒
କହି ଲେଖ Speak to fill Answer form questions by voice; it never presses Submit	☒	☐	☒	☒	☒	☐	☒
କହି ଚଳାଅ Voice command Say where to go and it opens the link	☒	☐	☒	☒	☒		☒
ଆରାମ ଅକ୍ଷର Comfortable letters Dyslexia-friendly font, extra spacing, warm background		☐		☐		☒	

☒ Main help ☐ Also helps Every tool works with keyboard only (Space pauses, Esc stops), and every change can be undone.

Rollout plan: Jajpur → OCAC → Odisha → India

3 / 3

STEP 1

Pilot: Jajpur

One district portal and one board site (BSE Odisha)

WHAT HAPPENS

Add one line of code to jajpur.odisha.gov.in and bseodisha.ac.in. Run AaaS on one server.

WHAT IT TAKES

One ordinary server CPU, no rebuild of either site, and no cost to citizens.

HOW WE KNOW IT WORKS

Citizens and staff try it; we count use of each tool and collect feedback.

STEP 2

OCAC

One shared server at the state data centre

WHAT HAPPENS

AaaS runs once at OCAC. Each department gets its own API key and usage report.

WHAT IT TAKES

One install serves every portal. Data stays inside the state data centre.

HOW WE KNOW IT WORKS

The admin console shows use by each department.

STEP 3

All Odisha

Every department portal

WHAT HAPPENS

Every department portal adds the line: pensions, scholarships, results, grievances.

WHAT IT TAKES

Fits 5T (Technology, Transparency) and Mo Sarkar. The Chrome extension covers sites that haven't adopted it yet.

HOW WE KNOW IT WORKS

Fewer citizens need a middleman to use online services.

STEP 4

India

Other states, in their own languages

WHAT HAPPENS

Other states adopt it, adding Hindi, Bengali, Telugu and other languages.

WHAT IT TAKES

The AI engines already cover 22 Indian languages: add a language, not a new product. Bhashini can be plugged in as an engine.

HOW WE KNOW IT WORKS

Open source (Apache-2.0), so any state can adopt it for free.

Portals stay as they are

No redesign; one line of code per site

One server, whole state

Shared infrastructure, like UPI for accessibility

Ready today

Working prototype, tested on real Odisha government sites
