

Your Demo Walkthrough

What to click, what to say - on stage.

Before the judges arrive (2-minute setup)

- Open the demo site at **http://127.0.0.1:8000/demo/** - this is the Jajpur landing page.
- Turn laptop volume up. Plug in the external mic if you have one. Do one test read-aloud.
- Silence phone. Close WhatsApp, email, any notification apps.
- Put a water bottle and your printed cheat-sheet on the table.
- Breathe. You have practised this. It will go fine.

The demo in one picture

Scene 1 - Open the demo (20 seconds)

Point at the screen. Say:

"This is what a realistic Odisha college admissions page looks like today - English-first, dense, hard to use for a student who reads only Odia or can't see the screen. Watch what happens when our layer turns on."

Scene 2 - Click the '■' button (15 seconds)

Point at the bottom-right corner. Click the floating Odia letter ■. The accessibility panel slides up. Say:

"This is the AaaS widget. One button. Any college can paste three lines into their HTML and every student on their site gets this."

Scene 3 - Read the page aloud in Odia (45 seconds)

Click **Read this page**. Odia voice starts playing. Say:

"The page is now being read aloud in Odia. The voice is from Meta's MMS-TTS model, running on the laptop. No internet needed. No student data leaving the server."

After about 10 seconds, press Space to pause. Move on.

Scene 4 - Translate the page to Odia (45 seconds)

Click **Translate this page** → **Odia**. Watch blocks of English text turn into Odia. Say while it happens:

"We use Meta's NLLB-200 translation model. An Odia-speaking student can now read every form label, every instruction, every error message - in Odia. Not English."

Scene 5 - Speak to fill a form (60 seconds)

Click inside the **Name** form field. Click the widget's **Speak to fill** button. Allow microphone when the browser asks.

Speak this sentence aloud, slowly and clearly:

ଠେର ନାମ ପ୍ରତିକ୍ଷ୍ୟା

Transliteration: Mora naam Pratikshya.

Meaning: "My name is Pratikshya."

Your spoken Odia will appear in the form field as Odia text. Say:

"I just filled a form by voice. In Odia. This is AI4Bharat's IndicWav2Vec model recognising Odia speech - about 85% accurate, far better than global tools."

Scene 6 - Close (20 seconds)

Stand up straight. Look at the judges. Say:

"Twenty-one lakh persons with disabilities in Odisha. Forty-two million Odia speakers. Two hundred colleges, each currently inaccessible on its own. We make accessibility a shared public layer. Odisha first. India next. Happy to answer anything."

Then stop talking. Wait for the judges. Don't keep pitching.

If something breaks on stage

Don't panic. Don't apologise twice. Say *one* of these:

- "One moment, the model is under load - let me show you the scripted run."
- "Wi-Fi is slow - the widget falls back to the browser's speech engine. The point still stands."
- "Let me skip that scene - our compliance dashboard is the clearer one anyway."

Move on. Judges remember how you handle a breakage more than the breakage itself.
